

The ultimate family adventure SUV

NEW Haval H9

HAVAL
Have it all.

Get ready for your new adventure

The lifestyle needs of today's world have never been more demanding on the family SUV.

From the morning school run, to loading up the gear for your weekend DIY project to venturing off the beaten track for that holiday adventure, we expect more and more from our daily driver.

That was the starting point for the engineers at Haval when they began work on the new H9. It's designed to handle all your family chores with ease with its mix of luxury and comfort. It's also tough enough to create a new set of happy memories on whatever holiday trip your family throws at it.

Critically, it has been designed to ensure your most precious cargo is always protected with the latest safety features and security technology.

Explore in Style

No matter what you or your family is doing or where you're going, in the new Haval H9 you're doing it with style.

With a distinctly different look, there's no mistaking the H9 for any other vehicle on the road.

Stylish lines represent the culmination of years of hard work by a team of dedicated designers and engineers to produce the finest possible SUV. Function blends seamlessly with form from the distinctive horizontal chrome grille bars to the smooth operation of the tailgate.

Xenon headlamps and daytime running lights are standard on all H9 models to brilliantly illuminate the road ahead, while the ULTRA version features adaptive front lighting to help you see around corners for increased safety and visibility. Ambient light sensors constantly monitor the brightness of the surrounding environment and switch the headlamps on and off automatically.

The low front and high rear waistline accentuate the sporting appearance of the H9, ensuring it looks just as good standing still as it does carving a path through the urban jungle or exploring off the beaten track. It not only looks good, it's aerodynamically designed to channel the airflow around the car for maximum efficiency and lower road noise.

Other practical standard features include side steps and stainless steel scuff plates for ease of entry and exit and aerodynamically designed roof rails to assist transportation of large items quickly and easily.

Explore in Comfort

The new Haval H9 combines luxury materials throughout, outstanding fit and finish, leading technologies, space and attention to detail to make every journey a comfortable experience.

Every element has been designed with maximum legibility and clarity, with back-lit switches to provide ease of use in all conditions. The leather-stitched steering wheel (heated in the ULTRA) falls easily to hand and is fully adjustable to make sure every driver can find the perfect driving position.

The large, easy to use centre instrument panel houses a large 8-inch touch screen that provides clear, concise information for a host of functions including climate control, satellite navigation, reverse camera, audio and – on the ULTRA model – seat heating, ventilation and massage functions. Positioned next to the speedo is a virtual dashboard with customisable designs and vehicle functions. The instrument panel combines large easy to read analogue dials for speedometer and tachometer, and houses a 3.5-inch LED screen complete with a host of driver-friendly read-outs including speed, average speed, fuel consumption, distance to empty and tyre pressure monitoring.

Tri-zone climate control air-conditioning ensures passengers can dial in their preferred temperature, while roof-mounted vents in the second and third rows deliver clean, climate-controlled air to all occupants.

There's plenty of storage space for drinks and power sockets to charge mobile phones or tablets. If the family needs extra capacity, the second row folds 60:40 and the third row folds 50:50 providing a cavernous 1457 litres of space if required. The ULTRA version even comes with heated seats for the second-row passengers and electric folding third row seats.

The front wheels ride on a double wishbone suspension, with unequal length upper and lower wishbones designed to change camber angle to easily accommodate any change in road surface. That means the tyre maintains maximum contact with the road, reducing tyre wear and delivering a smooth, comfortable ride for you and your family.

The multi-link rear suspension provides high levels of control, greatly reducing undue forces generated by the road surface. This improves comfort levels for all occupants and helps deliver optimum launch feel and braking power.

Smooth and Powerful

The new Haval H9 comes with a state-of-the-art turbocharged petrol engine that delivers family-friendly power.

With 180 kilowatts of power and 350 Newton-metres of torque, the H9 has all the power you need to meet every challenge. The engine uses a turbocharger boasting variable geometry technology, which alters the pitch of the fan blades to provide optimum performance according to the driving conditions. Drive it and you'll experience smooth take-off, powerful acceleration when required and fuel economy at cruising speeds. It also features a twin channel charger intake system to improve turbo performance, while variable valve timing (VVT) delivers maximum power, increased fuel efficiency and reduced emissions.

The turbo engine is matched to an all-new, German engineered ZF 8-speed automatic transmission. Similar to the gearbox used by leading European luxury car manufacturers, it delivers a silky smooth drive, effortless launch feel and efficiency, and, when the mood takes you, switch the H9 to Sport mode and flick the paddle shifters for that extra dose of adrenalin.

For family adventures

The new Haval H9 was designed and built for busy families with thoughtful features to make life a little less stressful.

Practicality starts as you approach the car, with the ease of key-less entry. With the keys in your pocket, the driver only need wrap their hand around the color-coded door handle to unlock the vehicle and allow entry for all passengers. Accessing the H9 is made easy with standard side-steps and plenty of grab handles.

Start the new H9 and the large, TFT instrument panel comes to life displaying all the vital information the driver needs to start safely. It immediately provides warnings of any open doors, if the vehicle is low on fuel or the tyre pressures are outside the recommended operating range.

The H9 features an electro-chromatic (self-dimming) rear view mirror to prevent night time glare and incorporates built in seat belt warning lights.

The large, easy-to-read centre stack houses a high definition touch screen that provides access and control for a host of functions including climate control and audio.

If you are heading for the snow, the heated seats, steering wheel and wipers on the H9 ULTRA are ready for the adventure.

Wide open spaces

Look around the new H9 and you quickly realise there's ample room for all seven occupants. Fold the second and third-row seats flat and there's a cavernous 1457 litres of space on offer. These can be manipulated in numerous ways via the 60:40 split fold second row or 50:50 split fold third row.

Unlike many '7-seat' SUVs on the market today, the H9 comes with plenty of room for the family members in the third row, with a generous 700mm of legroom built in.

Both versions of the new H9 feature a sunroof as standard equipment. The LUX model features a standard aperture sunroof, while the ULTRA comes with a full-length panoramic sunroof to provide the ultimate view from a world-class interior.

The H9 LUX comes with a high-fidelity sound system that delivers crystal clear sound from a variety of sources (Bluetooth, CD, USB, radio) through seven quality speakers. Move up to the ULTRA and the sound system comes with INFINITY brand speakers, including an under-seat mounted sub-woofer. Both systems can be controlled via the steering-wheel mounted controls.

H9 ULTRA panoramic sunroof.

Safe passage for all

The new Haval H9 comes with a full suite of active and passive safety systems designed to provide a haven for you and your most precious cargo in all conditions.

It starts with a strong frame, incorporating a high-performance safety shell that works to actively channel the energy from a collision around the passenger safety cell, keeping it intact and the occupants safely cocooned inside. That shell is complemented by an array of active and passive safety systems, including six airbags to protect all passengers, including full-length side curtain airbags. In the unfortunate event of an accident, the intelligent safety systems react in milliseconds to shelter all passengers with maximum protection.

The latest safety technology is now available with three potentially life-saving systems: **Blind Spot Monitoring** (BSM), **Lane Departure Warning** (LDW) and **Rear Cross Traffic Alert** (RCTA).

Blind Spot Monitoring

BSM employs digital cameras mounted on the side vision mirrors to constantly monitor traffic movements alongside and provide a visual and audible warning if the H9 driver moves into the lane where the other vehicle is located.

Lane Departure Warning

LDW monitors the road markings to advise the driver if they inadvertently wander out of their lane, with a visual and audible reminder alerting the driver to move back.

Rear Cross Traffic Alert

RCTA is an extension of the rear camera system and designed to warn the driver of any cars that are entering your path when reversing. This is particularly helpful in a busy parking lot, where RCTA can detect moving cars far quicker than human senses.

The Haval H9 is also fitted with active **Tyre Pressure Monitoring System** (TPMS). Safety experts believe that incorrect tyre pressures contribute to around 80% of accidents involving punctures, which is why tyre pressure monitoring systems are now mandatory in the US. The H9 TPMS keeps an eagle eye on tyre pressures and alerts you to any abnormality. It's not only a great safety feature, driving with the correct tyre pressures also delivers a smoother ride and better fuel efficiency.

To maximise safety and visibility, every H9 comes with a reverse camera (with parking guidelines) and front and rear parking sensors.

Haval dynamic engineers use the latest generation Bosch **Electronic Stability Program** to improve vehicle stability, reduce traction loss and reduce the risk of accident due to loss of car control. Employing a variety of sensors located around the vehicle, the system constantly monitors steering, speed and directional inputs. If any undue change is detected, ESP automatically adjusts braking and engine outputs to keep the vehicle tracking on the correct path.

ESP comes with two useful safety suites particularly designed to assist with off-road driving: **Hill Hold Control** (HHC) and **Hill Descent Control** (HDC). HHC is automatically engaged when stopped on any hill or incline with a grade of more than five degrees. It provides a few seconds of tractive braking, allowing the driver to release the brake and engage the accelerator without roll-back.

Without the driver touching the brake, HDC is designed to reduce the danger of descending steep hills. Using a combination of braking and transmission controls, HDC slows the vehicle to crawling speed and automatically applies individual brakes, allowing the vehicle to slowly 'crawl' down steep descents for improved driving safety.

Both H9 models come with **High Intensity Discharge Xenon** headlamps, designed to provide brilliant illumination that clearly lights the path ahead, without unintentionally blinding any driver travelling in the opposite direction. They offer three times the brightness of a traditional halogen lamp, while using less power and offering a far superior life cycle. The ULTRA also has a headlight self-cleaning system maximising illumination at all times. Standard on both models is a dusk sensor that automatically activate the lamps in low light conditions.

The H9 ULTRA also features **Adaptive Front Lighting System** (AFS) that allows the driver to 'look around' corners and automatically adjusting levels when traversing up and down hills. At low speeds, the fog lamps automatically illuminate while turning 90 degrees, to further improve visibility when arriving at your destination.

Choose your own adventure

The H9 is one of the most capable off-road vehicles you'll ever drive.

That's why Australia's leading off-road magazine – 4x4 Australia – named the H9 as one of the finalists in the grueling 2017 and 2018 4x4 Of The Year Award.

Starting with a rugged ladder frame chassis, the H9 was designed to offer a strong platform to help you conquer the most challenging conditions. Much more resistant to twisting forces, the ladder frame H9 chassis delivers a smooth, quiet ride in all conditions.

With a 700mm fording depth and long-travel compliant suspension, the new H9 takes water crossings, the bush and mountains in its stride.

Travelling off-road can be daunting, but the set and forget system engineered for the Haval H9 is designed to give you peace of mind and provide a safe, comfortable journey for you and your family. The new H9 comes with Haval's intuitive All Terrain Control System, designed to help the driver master any condition they encounter by selecting from one of the six pre-set programs that best suit the conditions: Auto, Sport, Snow, Sand, Mud, Sand and 4L. It automatically adjusts the vehicle's traction and braking force to ensure maximum grip and performance in any terrain.

Once you're on your adventure, check the digital display for the surface flatness, front to rear torque split, coolant and transmission oil temperature and even steering wheel angle. And with the push of a button you can check the barometric pressure, altitude, and external temperature.

Don't be surprised if the new H9 takes you further than you've ever ventured.

Who is Haval?

Haval is a specialist manufacturer of premium SUVs and is the No.1 SUV brand in the world's largest automotive market and has been for the past 15 years.

In 2017 Brand Finance valued Haval as the “world’s most powerful SUV brand” ahead of Jeep and Land Rover. With over 4 million customers, our success is due to a combination of commitment, passion and listening to our customers. We utilise the best features, safety and technologies from around the globe to produce world class SUVs.

At Haval, we don’t build cars, utes, commercial vehicles or trucks; only high quality SUVs. As specialists we are obsessed with detail and constantly look to refine and improve every part of the vehicle. We employ purpose designed SUV suspension that combines surprising off-road capability with superb on-road handling and comfort.
